PROFESSIONAL SUMMARY

Software engineering student with hands-on experience building full-stack, AI-integrated products from concept to deployment. Skilled across backend development, database design, and modern web technologies, with particular interest in AI agents and system design. Proven ability to learn quickly, debug complex issues, and ship real, working software independently, most recently an AI-powered competitive intelligence platform, an AI-powered fitness coaching platform, and a community skill-sharing application. Focused on combining strong engineering fundamentals with product thinking to deliver software that creates measurable user value.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, HTML, CSS

Frameworks & Libraries: React, Next.js, Node.js, Express.js, Tailwind CSS, Prisma

Databases: PostgreSQL, Supabase

AI & Integrations: OpenAI APIs, Whisper, Google Gemini, OpenRouter, CrewAI, Serper API, Sarvam AI, REST APIs

Tools & DevOps: Git, GitHub, Docker, Postman, VS Code, Inngest

Core Concepts: Authentication (JWT/OAuth), REST API Design, Database Design, SDLC, AI Agents, Prompt Engineering

Soft Skills: Fast Learner, Rapid Adaptability, Problem Solving, Analytical Thinking, Communication, Teamwork, Product Thinking, Debugging, Time Management

EXPERIENCE

Founder's Office Intern — Supatest AI, Bangalore

May 2025 – Jul 2025

- Designed and executed manual test cases for products including Skit.ai and Keka, identifying critical bugs and contributing directly to product quality.
- Collaborated closely with cross-functional teams, gaining first-hand exposure to how early-stage startups operate and ship features quickly.
- Applied feature-thinking principles to build solutions around customer needs rather than internal assumptions, and explored test automation using Playwright to understand how it improves reliability and development speed.

FEATURED PROJECTS

MarketMind — AI-Powered Competitive Intelligence Platform

TypeScript, Next.js, React, Tailwind CSS, Supabase, Prisma, Inngest, OpenRouter

- Identified early-stage startups tracking competitors manually through spreadsheets and bookmarked pricing pages, and built MarketMind to automate ongoing competitive analysis.
- Designed the product as an analyst-style briefing rather than a dashboard, processing a single input URL into a full competitive readout in about 60 seconds.
- Built automatic competitor discovery that maps and ranks the entire competitive landscape from a single URL.
- Implemented continuous monitoring of thousands of public signals for round-the-clock market tracking, and engineered processing so raw events never reach the user unfiltered — each signal ships with its business relevance and a recommended action.
- Maintained a strict separation between verified facts, AI inferences, and recommendations, labeling verified sources and attaching confidence scores to AI-generated inferences.

FitAI — AI-Powered Fitness Coach & Progress Tracker

JavaScript, React, Vite, Node.js, Express.js, Supabase, Google Gemini API

- Identified a common problem of poor accountability and inconsistent progress tracking in personal fitness journeys, and designed a full-stack, AI-powered platform for logging workouts, tracking progress, and personalized coaching.
- Implemented secure authentication, real-time data management, and AI-driven insights using the Google Gemini API.
- Architected a multi-provider AI cascade with health monitoring and automated fallback logic to ensure reliable AI responses.

SkillMesh — Community-Driven Skill-Sharing Platform

TypeScript, React, Vite, Node.js, Express.js, Supabase

- Identified an opportunity for a platform centered on practical, peer-to-peer skill exchange rather than passive content sharing, and built a prototype for users to discover others by skill, showcase what they can teach, and connect to learn.
- Applied product thinking by validating the concept through rapid prototyping and iterative feature development.

EDUCATION

Bachelor of Technology (B.Tech.) in Electronics and Communication Engineering

GITAM Deemed to be University — Visakhapatnam, India | Expected 2027

- Developed a strong interest in software engineering, AI, and product development through self-driven projects alongside academics; participated in the Smart India Hackathon, designing a tourist safety solution using digital identity verification, geofencing, and rule-based emergency alerts for high-risk zones.
- Active in powerlifting competitions and the Kalakrithi Acting Club, building discipline, consistency, and communication skills.
