PROFESSIONAL SUMMARY

Software engineering student with hands-on experience building full-stack, AI-integrated products from concept to deployment. Skilled across backend development, database design, and modern web technologies, with particular interest in AI agents and system design. Proven ability to learn quickly, debug complex issues, and ship real, working software independently, most recently an AI-powered fitness coaching platform and a community skill-sharing application. Focused on combining strong engineering fundamentals with product thinking to deliver software that creates measurable user value.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, HTML, CSS

Frameworks & Libraries: React, Node.js, Express.js

Databases: PostgreSQL, Supabase

AI & Integrations: OpenAI APIs, Whisper, Google Gemini, CrewAI, Serper API, Sarvam AI, REST APIs

Tools & DevOps: Git, GitHub, Docker, Postman, VS Code

Core Concepts: Authentication (JWT/OAuth), REST API Design, Database Design, SDLC, AI Agents, Prompt Engineering

Soft Skills: Fast Learner, Rapid Adaptability, Problem Solving, Analytical Thinking, Communication, Teamwork, Product Thinking, Debugging, Time Management

EXPERIENCE

Founder's Office Intern — Supatest AI - Bangalore

May 2025 – Jul 2025

- Designed and executed manual test cases for products including Skit.ai and Keka, identifying critical bugs and contributing directly to product quality.
- Collaborated closely with cross-functional teams, gaining first-hand exposure to how early-stage startups operate and ship features quickly.
- Applied feature-thinking principles to build solutions around customer needs rather than internal assumptions.
- Explored test automation using Playwright, gaining an understanding of how automated testing improves reliability and development speed.

FEATURED PROJECTS

FitAI — AI-Powered Fitness Coach & Progress Tracker

TypeScript, React, Vite, Node.js, Express.js, Supabase, Google Gemini API

- Identified a common problem of poor accountability and inconsistent progress tracking in personal fitness journeys.
- Designed and built a full-stack, AI-powered fitness platform enabling users to log workouts, monitor progress, and receive personalized coaching guidance.
- Implemented secure authentication, real-time data management, and AI-driven insights using the Google Gemini API.
- Architected a multi-provider AI cascade with health monitoring and automated fallback logic to ensure reliable AI responses.

SkillMesh — Community-Driven Skill-Sharing Platform

JavaScript, React, Vite, Node.js, Express.js, Supabase

- Identified an opportunity for a platform centered on practical, peer-to-peer skill exchange rather than passive content sharing.
- Designed and built a prototype enabling users to discover others by skill, showcase what they can teach, and connect to learn.
- Applied product thinking by validating the concept through rapid prototyping and iterative feature development.

EDUCATION

Bachelor of Technology (B.Tech.) in Electronics and Communication Engineering

Expected 2027

GITAM Deemed to be University - Visakhapatnam, India

- Developed a strong interest in software engineering, AI, and product development through self-driven projects alongside academics.
- Participated in the Smart India Hackathon, designing a tourist safety solution using digital identity verification, geofencing, and rule-based emergency alerts for high-risk zones.
- Active in powerlifting competitions and the Kalakrithi Acting Club, building discipline, consistency, and communication skills.
